## DETAILED ACTION

### EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Mr. Reltseng Lin(Reg. No. 42,804) on 4/23/08.

In the claims:

- Claim 15, 'a method for controlling communication from a serial interface circuit to a receiver-transmitter circuit in a system under control of a CPU and an operating system, the method comprising the steps of: detecting a mode of operation of the system; if the mode is a first mode, allowing the serial interface circuit to transmit signals to the receiver-transmitter circuit wherein the serial interface circuit can rise a bi-directional line; and if the mode is a second mode, detecting whether the receiver-transmitter circuit is transmitting signals to the serial interface circuit, and if the receiver-transmitter circuit is transmitting signals to the serial interface circuit, prohibiting the serial interface circuit from re-transmitting the signals received from the receiver-transmitter circuit back to the receiver-transmitter circuit and thereby preventing the receiver-transmitter circuit from generating an interrupt signal' **has been changed to** ---a method for

controlling communication from a serial interface circuit to a receiver-transmitter circuit in a system under control of a CPU and an operating system, the method comprising the steps of: detecting a mode of operation of the system; when the mode is a first mode, allowing the serial interface circuit to transmit signals to the receiver-transmitter circuit wherein the serial interface circuit can rise a bi-directional line; and when the mode is a second mode, detecting whether the receiver-transmitter circuit is transmitting signals to the serial interface circuit, and when the receiver-transmitter circuit is transmitting signals to the serial interface circuit, prohibiting the serial interface circuit from re-transmitting the signals received from the receiver-transmitter circuit back to the receiver-transmitter circuit and thereby preventing the receiver-transmitter circuit from generating an interrupt signal; and wherein the method is performed in a television receiver---.

- Claim 20, line 1, 'the method of claim 15' **has been changed to** ---the method of claim 19---
- Claim 21, 'a circuit arrangement comprising: a first circuit having an output line and an input line; a second circuit having an input line for receiving signals from the output line of the first circuit, and an output line for transmitting signals to the input line of the first circuit, the second circuit further comprising a bi-directional line; and a control circuit having input lines for receiving the signals from the output lines of the first and second circuits, the control circuit inhibiting the signals transmitted from the output line of the second circuit to the input line of

the first circuit when the first circuit is transmitting signals to the input line of the second circuit and thereby preventing the second circuit from re-transmitting the signals received from the first circuit back to the first circuit and further preventing the first circuit from generating an interrupt signal' **has been changed to** ---a circuit arrangement comprising: a first circuit having an output line and an input line; a second circuit having an input line for receiving signals from the output line of the first circuit, and an output line for transmitting signals to the input line of the first circuit, the second circuit further comprising a bi-directional line; and a control circuit having input lines for receiving the signals from the output lines of the first and second circuits, the control circuit inhibiting the signals transmitted from the output line of the second circuit to the input line of the first circuit when the first circuit is transmitting signals to the input line of the second circuit and thereby preventing the second circuit from re-transmitting the signals received from the first circuit back to the first circuit and further preventing the first circuit from generating an interrupt signal; and wherein the circuit arrangement is included in a television receiver---
